
GISHydroWEB RELEASE NOTES

v0.7

10/28/2022

INCLUDED IN UPDATE:

- Fixed Tc value assignment to WinTR20. Now values are correctly added to input file, also user is allowed to edit before running WinTR20.
- Fixed WinTR20 input file indexing (added decimal places to rating table, and fixed spacing)
- Fixed flow direction not clipping correctly for some watersheds, not allowing the user to continue with basin properties.
- Improved “Draw Point” button interaction in delineation tab.
- Added a Warning alert when drainage area extends beyond GISHydroWEB.

BUCKET LIST:

- Make shapefile format the default for downloading layers.
 - Download a zip file of the project geodatabase.
 - Add GISHydroWEB documentation
 - Add RESET feature instead of refreshing the browser
 - Import user defined watersheds
-

Software glitches and bugs can occasionally happen. If you encounter one of these bugs, please report it to gis@mdot.maryland.gov
